

## Statement of Non-Consideration of the Principal Adverse Impacts of Investment Decisions on Sustainability Factors

### Introduction

Article 4(1) of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector establishes transparency obligations regarding adverse sustainability impacts at entity level:

*"Financial market participants shall publish and maintain on their websites: (a) (b) where they consider the principal adverse impacts of investment decisions on sustainability factors, a statement on their due diligence policies with respect to those principal adverse impacts, taking into account their size, the nature and scale of their activities and the types of financial products they make available; or where they do not consider adverse impacts of investment decisions on sustainability factors, a clear explanation of why they do not do so, and, where relevant, information about whether and when they intend to consider such adverse impacts."*

### Identification of Principal Adverse Sustainability Impacts

Tresmares Private Equity SGEIC and Tresmares Direct Lending SGEIC (hereinafter, collectively, "Tresmares"), as financial market participants as defined in the aforementioned disclosure regulation, are required to disclose to the market and to their clients whether or not they consider adverse sustainability impacts and, where applicable, the reasons why they do not.

For these purposes, it is hereby stated that Tresmares, in its alternative fund management activity, does not take into account principal adverse impacts on sustainability factors (PAIs).

The primary reason for not considering the principal adverse impacts is the difficulty of actively managing and monitoring adverse impact indicators, due to:

1. **Data availability:** owing to the nature of the assets comprising the alternative or illiquid vehicles, the availability of ESG data is limited, particularly given the characteristics and size of the investments; and
2. **Data quality and reliability:** there is a lack of standardisation and transparency in ESG data, which makes it difficult to compare companies and to accurately assess their results.
